

## **In the Claims**

This listing of claims replaces all prior versions and listings of the claims in the application.

Please amend the claims as follows:

1. (Currently Amended) A smartcard transaction system configured with a biometric security device, said system comprising:

a smartcard configured to communicate with a reader, wherein said reader and said biometric security device are configured to communicate with a host;

an integrated circuit device disposed within said smartcard and configured to communicate with said reader, said integrated circuit device comprising a common application and a second application, said second application being configured to store travel-related information associated with a cardholder;

said second application comprising a common file structure and a partner file structure, wherein said partner file structure provides write access to a field within said partner file structure for a first partnering organization and denies write access to said field for a second partnering organization, and said common file structure provides write access for said first partnering organization and said second partnering organization to file in said common file structure;

said biometric security device comprising a biometric sensor configured to detect a proffered biometric sample, said biometric sensor is configured to communicate with said system; and,

a verification device configured to verify said proffered biometric sample to facilitate a ~~payment~~ transaction using at least one of said partner file structure and said common file structure ~~an account, wherein said proffered biometric sample is associated with at least one of: a charge card account, a credit card account, a debit card account, a savings account, a private label account and a loyalty point account, and wherein said verification device is further configured to verify whether said proffered biometric sample is associated with a preset transaction limitation independent of any limitation associated with said account.~~

2. (Previously Presented) The smartcard transaction system of claim 1, wherein said biometric sensor is configured to communicate with said smartcard transaction system via at least one of said smartcard, said reader, and a network.
3. (Currently Amended) The smartcard transaction system of claim 1, wherein said partner file structure enables said first partnering organization to program said smartcard as a room key ~~biometric sensor is configured to facilitate a finite number of scans.~~
4. (Previously Presented) The smartcard transaction system of claim 1, wherein said biometric sensor is configured to store log data comprising at least one of a detected biometric sample, a processed biometric sample and a stored biometric sample, and wherein said biometric sensor is further configured to employ a security procedure when said proffered biometric sample differs from said log data.
5. (Original) The smartcard transaction system of claim 1, further including a database configured to store a data packet, wherein said data packet includes at least one of proffered and registered biometric samples, proffered and registered user information, terrorist information, and criminal information.
6. (Previously Presented) The smartcard transaction system of claim 5, wherein said database is contained in at least one of said smartcard, said reader, said biometric sensor, a remote server, a merchant server and said smartcard system.
7. (Original) The smartcard transaction system of claim 6, wherein said remote database is configured to be operated by an authorized sample receiver.
8. (Previously Presented) The smartcard transaction system of claim 1, further including a comparison device configured to compare said proffered biometric sample with a stored biometric sample.
9. (Previously Presented) The smartcard transaction system of claim 8, wherein said comparison device is configured to compare a biometric sample characteristic, said biometric sample characteristic including minutia, vascular patterns, prints, waveforms, odorants, nodal points, reference points, size, shape, thermal patterns, blood flow, and body heat.

10. (Previously Presented) The smartcard transaction system of claim 8, wherein said stored biometric sample is stored by at least one of a third-party biometric security vendor and a governmental agency.
11. (Previously Presented) The smartcard transaction system of claim 8, wherein said stored biometric sample comprises a registered biometric sample.
12. (Previously Presented) The smartcard transaction system of claim 11, wherein said registered biometric sample is associated with at least one of: personal information, credit card information, debit card information, savings account information, membership information, PayPal account information, Western Union Account information, electronic bill payment information, automatic bill payment information and loyalty point information.
13. (Currently Amended) The smartcard transaction system of claim 12, wherein ~~each of said~~ different registered biometric samples are associated with a different one of: personal information, credit card information, debit card information, savings account information, membership information, PayPal account information, Western Union Account information, electronic bill payment information, automatic bill payment information and loyalty point information.
14. (Previously Presented) The smartcard transaction system of claim 12, wherein said biometric sample is primarily associated with a first user account, wherein said first account comprises personal information, credit card information, debit card information, savings account information, membership information, PayPal account information, Western Union Account information, electronic bill payment information, automatic bill payment information and loyalty point information, and wherein a biometric sample is secondarily associated with a second user account, wherein said second account comprises personal information, credit card information, debit card information, savings account information, membership information, PayPal account information, Western Union Account information, electronic bill payment information, automatic bill payment information and loyalty point information, where said second user account is different than said first user account.
15. (Original) The smartcard transaction system of claim 1, wherein said smartcard transaction system is configured to begin authentication upon verification of said proffered biometric sample.

16. (Currently Amended) The smartcard transaction system of claim 1, wherein said first partner file structure includes card-holder preferences relating to at least one of rental cars, hotel reservations, and air travel ~~said smartcard is configured to deactivate upon rejection of said proffered biometric sample.~~

17. (Previously Presented) The smartcard transaction system of claim 1, wherein said biometric sensor is configured to provide a notification upon detection of said proffered biometric sample, and wherein said notification is at least one of a notification to a security vendor, a notification to a store employee, and a notification to a primary account holder that said primary account is being accessed.

18. (Previously Presented) The smartcard transaction system of claim 1, wherein said verification device is further configured to facilitate at least one of access, activation of a device, a financial transaction, and a non-financial transaction.

19. (Currently Amended) The smartcard transaction system of claim 1, wherein said verification device is configured to facilitate the use of a secondary security procedure, which includes sending a signal to said host to notify that a requested transaction would violate an established rule for said transponder ~~is being violated.~~

20. (Currently Amended) The transponder-reader transaction system of claim 1, wherein said biometric sample is associated with a preset transaction limitation ~~comprises~~ comprising at least one of a maximum transaction amount, minimum transaction amount, maximum number of transactions within a time period, maximum number of transactions, use by certain merchants, temporal limitation, geographic limitation, and use of non-monetary funds.

21. (Cancelled)
